

Welcome to verification planning

Welcome to verification planning and management

What you'll build toward

- The arc is plan, coverage, regression, sign-off
- VIP handoff deliverables
- Deep VIP engines stay in protocol and UVM courses

Two tracks, one idea

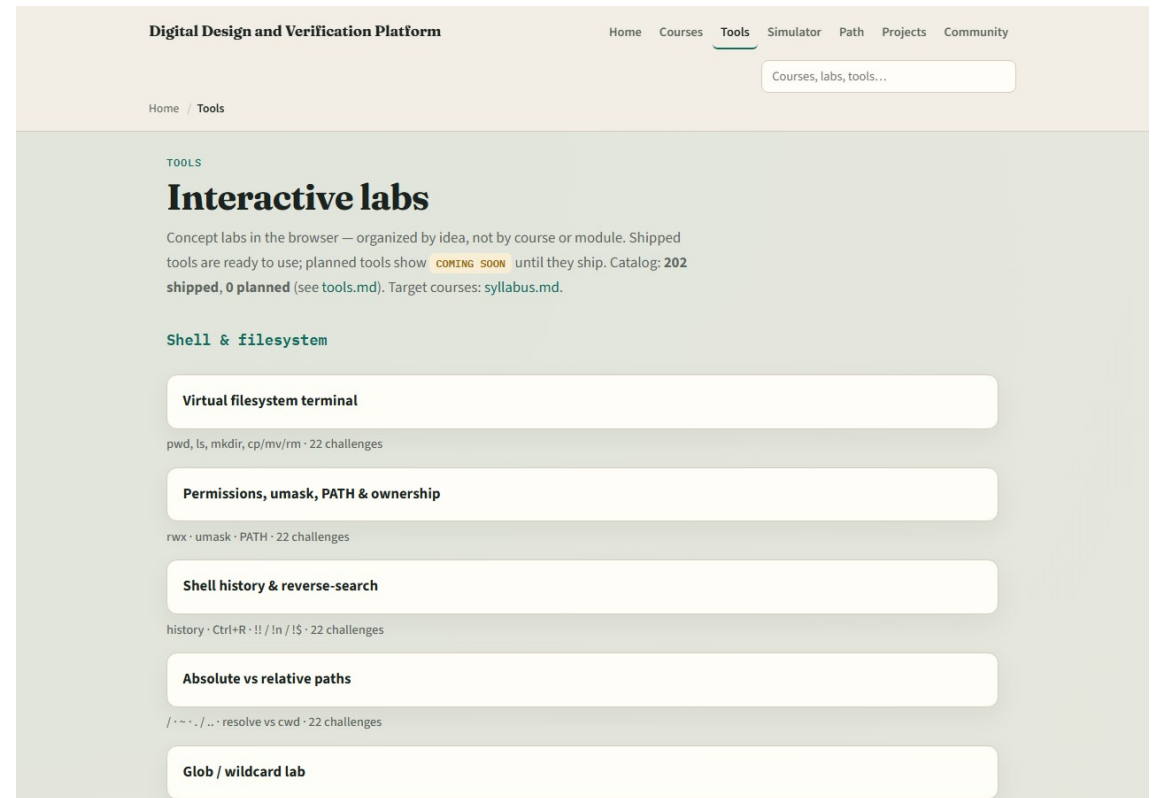

- Track A is planning docs you keep
- Track B is the platform's verification-planning boards
- You may do either track, or both
- A good rhythm is browser board first for vocabulary

Set up Track A

- Open this course folder and skim the module READMEs
- Keep a notebook or markdown file ready for small tables
- Optional: browse the legacy planning materials for templates
- From the course root, self-check scripts can grade checklist items when you want them
- Helpful prereq

Set up Track B

- From the monorepo
- All twelve planning labs ship, from plan checklist through VIP handoff
- If you prefer, use the published tools site instead
- Confirm you can reach the index; the next module opens the coverage and plan checklist lab

How to move through modules

- For each module
- Prefer Track B for graded board challenges
- When you finish this intro checklist, continue to the coverage and plan checklist
