

Feature × scenario matrix

A matrix makes intersections visible

Planned versus covered

- Mark P when you intend a test or story for that intersection
- Mark C when a bin, checklist, or passing directed check proves it
- A board with no empty cells can still be weak if everything is only P
- Closing gaps means either plan the empty cell or produce coverage for a planned one

INTERACTIVE TOOL

Feature × scenario matrix

Document-aid literacy: a **traceability grid** of features vs scenarios — cells are **planned**, **covered**, or **gap**. Starter: UART TX/RX × byte/idle — no empty cells.

Starter example: UART TX/RX × byte/idle/err — every cell is P or C (no gaps).

Challenges 0 / 22 cleared

Quiz: matrix: A feature × scenario matrix is...

☐ a traceability grid of capabilities vs test stories

☐ a synthesis netlist

☐ only a Makefile PHONY list

☐ a VCD dump format

Core ideas

feature

Row: capability to verify.

scenario

Column: test story.

P / C

Planned intent vs covered evidence.

gap

Empty cell — unplanned intersection.

Lab

SCENARIO

no gaps

Lab starter

Planning docs practice

- Draw a two-by-three grid for one block: two features, three scenarios
- Fill each cell with dash, P, or C
- Leave one empty on purpose, then write the next action that would fill it
- That next-action habit is the point of the matrix

Pitfalls to watch

- Do not conflate P with C
- Do not celebrate zero empty cells when nothing is covered
- Do not hide rare scenarios off the grid
- And do not grow the matrix so huge that nobody maintains it, start small and real

Your turn

- Complete the checklist for at least one track, preferably both
- Scan one matrix for gaps, fix or name them, then take the quiz and continue to cover bins
